SOFTWARE ENGINEERING – MODULE 2
Introduction to Programming
SESSION / ASSIGNMENT – 2

TASKS :

1. **Install GCC on your computer and verify the installation by running gcc --version in your terminal or command prompt.**

➔

```
C:\Users\Admin>gcc --version
gcc (MinGW.org GCC-6.3.0-1) 6.3.0
Copyright (C) 2016 Free Software Foundation, Inc.
This is free software; see the source for copying conditions.  There is NO
warranty; not even for MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE.
```

2. **Open VS Code or DevC++ and create a new file named hello.c. Write a C program that prints 'Hello, Instagram World!' to the console.**

➔

```c
#include <stdio.h>

int main(){
    printf("Hello, Instagram World!");
    return 0;
}
```

OUTPUT:

```
PS E:\OOPJ_Net_Beans_practical-project\TOPS_workshop\C> cd "e:\OOPJ_Net_Beans_practical-project\TOPS_workshop\C\" ; if ($?) { gcc hello.c -o hello } ; if ($?) { .\hello }
Hello, Instagram World!
```

3. **Identify and label the header, main function, and return statement in your hello.c program using comments.**

➔

```c
#include <stdio.h>     // header

int main(){            // main function

    printf("Hello, Instagram World!");

    return 0;          // return statement
}
```

4. **Compile your hello.c file using the GCC command line (gcc hello.c -o hello) and run the output file to display the message in your terminal.**

   Hint: On Windows, the output file will be hello.exe; on Linux/Mac, it will be hello.

➔

```
PS E:\OOPJ_Net_Beans_practical-project\TOPS_workshop\C> cd "e:\OOPJ_Net_Beans_practical-project\TOPS_workshop\C\" ; if ($?) { gcc hello.c -o he
llo } ; if ($?) { .\hello }
Hello, Instagram World!
```

OUTPUT FOLDER :

```
C hello.c
  hello.exe
```
