

PYTHON - SE - BACKEND
SOFTWARE ENGINEERING
MODULE - 1
SESSION / ASSIGNMENT – 2

TASKS :

1. What are the three main layers of software architecture? Write one line about each.

➔ **1. Presentation Layer**

This layer provides the user interface and allows users to interact with the application.

2. Business Logic Layer

This layer processes data and implements the application's rules and functionality.

3. Data Layer

This layer stores, retrieves, and manages data in the database.

2. Define client and server in your own words with one real-life example.

➔ **Client** – A device or application that requests information or services.

Server – A system that provides information or services to clients.

Example: When you open YouTube on your phone, your phone is the client and YouTube's computers that send videos are the servers.

3. Write 2 differences each between desktop apps, web apps, and mobile apps.

Feature	Desktop Apps	Web Apps	Mobile Apps
Installation	Must be installed on a computer.	Run directly in a web browser without installation.	Installed on smartphones or tablets through an app store.
Platform	Designed for Windows, macOS, or Linux systems.	Can be accessed from any device with a browser and internet connection.	Designed specifically for Android or iOS devices.

4. Name any 3 databases and mention whether each is SQL or NoSQL.

- 1. MySQL – SQL**
- 2. PostgreSQL – SQL**
- 3. MongoDB – NoSQL**
